Anthony Errington

C# / .NET and SQL Server developer · Oxford · anthony.errington@gmail.com · linkedin.com/in/anthony-errington-a15659b

Profile

I've spent 17 years building the software UK councils use to run elections. I've taken new legislation from the first government spec to a live release, moved about 30 councils' data across without disrupting an election, and led my team's move to AI-assisted development. Available for contract and freelance work from 2027.

What I can help with

- Changing large, long-lived .NET and SQL Server systems safely
- Data migrations where accuracy matters and downtime is short
- Turning detailed, rule-heavy requirements into reliable software
- Getting a team using AI-assisted development well

Experience

Senior Developer, Elections · Idox (previously Halarose) · Oct 2015 – Dec 2026

- Took Welsh automatic voter registration from pilot to production, the first UK scheme to add people to the register without them applying. I analysed the government specs, estimated the work, built most of the matching and registration logic, and wrote the threat model.
- Delivered Elections Act 2022 changes, including EU citizens' voting rights, overseas elector renewals through the government's digital service, and new proxy and postal vote rules.
- Migrated about 30 councils' electoral data, including 16 in parallel before the December 2019 general election, using a one-click migration tool I built.
- Built a framework to merge any number of council databases for local government reorganisation, keeping every elector's history linked correctly.
- Proposed and led replacing a third-party signature engine with an in-house approach, removing a licence cost and producing an imaging library shared across products.
- Rewrote election-critical legacy logic as tested stored procedures, removing a hard limit on combined elections.
- Introduced an AI-first, spec-driven workflow shared by developers and QA, and wrote Claude Code skills capturing the team's product knowledge.
- Line-managed and mentored developers and led two product squads.

Software Developer / Team Leader · Halarose · Sep 2009 – Aug 2014

- Team leader for three years on EROS, the electoral registration system, line-managing up to 4 developers.
- Project-managed time-critical council data conversions; chaired customer calls and presented at user group conferences.

Skills

C#, .NET, SQL Server and T-SQL, WPF, Angular, tSQLt, SSIS, Azure DevOps / TFS, Claude Code, OpenSpec, Agile / Scrum. For web work: TypeScript, JavaScript, Astro.

Education

BA Computer Science (2:1), Cambridge · PGCE Secondary Mathematics, Oxford · MSc Psychology, Oxford Brookes
