Helping software teams adopt AI well · Oxford · anthony.errington@gmail.com · linkedin.com/in/anthony-errington-a15659b

## Profile

I help development teams start using AI in ways that stick and stay safe. At Idox I moved an elections software team from writing specs by hand to an AI-first way of working. It was a cautious, regulated setting, full of personal data. I'm also a qualified teacher and an experienced workshop facilitator, so the people side is where I'm strongest.

## What I can help with

- Hands-on workshops for developers and QA on AI-assisted coding, specs and testing
- Setting up a spec-driven workflow that developers and QA share
- Turning a team's hard-won product knowledge into AI skills that anyone can use
- Using AI to make sense of legacy code, logs and data quickly, with a person checking the results
- Sensible guardrails where personal or sensitive data is involved

## What I've done

**Senior Developer and AI champion, Elections** · Idox (previously Halarose) · Oct 2015 – Dec 2026

- Introduced an AI-first, spec-driven workflow (OpenSpec) now shared by developers and QA. I turned the documentation for a major legislative project into 7 living specs, and the scenarios feed acceptance criteria and AI-generated test cases. About 21 stories have gone through it.
- Wrote 13 Claude Code skills for the team. Each one captures a piece of product knowledge, including the traps behind real past faults.
- Ran AI-assisted investigations that took hours instead of weeks, each directed and checked by me. One measured a signature-matching engine's accuracy for the first time, across about 39,000 comparisons. It disproved the team's working theory and found 4 defects. Others ranked fixes from logs across 13 customer sites and found a third of a legacy app's screens were dead code.
- Built a documentation health tool, designed to make no external AI calls until security had signed it off.
- Line-managed and mentored developers, and led two product squads.
- Before AI: 17 years of C# / .NET and SQL Server, including taking new election law from government spec to live release and migrating about 30 councils' data.

### Teaching and facilitation

- PGCE Secondary Mathematics, University of Oxford, with placements in two secondary schools.
- Teaching on Improv in Six Acts for about 18 months, and assisting Paul Z Jackson with applied improv workshops for organisations (Paul Jackson Associates).
- Foundation Certificate in Counselling Skills (Metanoia Institute) and an MSc in Psychology. Useful when a team is nervous about change.

## Tools

Claude Code, OpenSpec, AI coding assistants; C#, .NET, SQL Server, Azure DevOps.

## Education

BA Computer Science (2:1), Cambridge · PGCE Secondary Mathematics, Oxford · MSc Psychology (Merit), Oxford Brookes
